Clipso Technical Fabrics is a Polyester Fabric coated with Polyurethane, which under most circumstances protecting it from absorbing odors. It is hydrophobic and requires little or no maintenance.

If cleaning is required, we recommend you to use the Clipso Cleaner (O-CCL10E) and the cleaning glove (O-GN20E) or a non-abrasive soft cloth.

The method to follow is:

Spray some Clipso Cleaner on the glove (or the soft cloth) and dab the area immediately. If the stain persist, it is possible to repeat the operation several times.

You can, if you wish, use your own cleaning product, provided it has a neutral PH

Clipso recommends that it be tested on a scrap piece of the fabric or in a small area that may not be noticeable.

Under no circumstance should bleach be used.
